APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967

IN ACCORDANCE with the supplementary Letters Patent approved by the Provincial Government of British Columbia and issued by the Lieutenant-Governor in Council on December 28, 1967, the Regional District of the Capital of British Columbia has been given the function of designing and constructing trunk sewers and sewage-disposal facilities in substantial accordance with the "Sanitary Sewerage Study of the Greater Victoria dated June, 1966, prepared by Associated Engineering Services Ltd.

For the past 55 years the north-west trunk sewer has actually discharged sewage directly onto the shoreline at Macaulay Point, and the main purpose of this application is to rectify this unsatisfactory and insanitary situation by construction of a properly designed long marine outfall into deep water, in accordance with the requirements of the Letters Patent of the regional district.

The Regional District of the Capital of British Columbia, of 209 Burnes House, Bastion Square, Victoria, British Columbia, hereby applies to the Director of Pollution Control for a permit to discharge effluent from a community sanitary sewerage system located at Saanich, Victoria, and Esquimalt into Juan de Fuca Strait, and gives notice of its application to all persons affected.

The point of discharge shall be located approximately 4,800 feet south of Macaulay Point.

The land upon which the effluent originates is known as Drainage Area 2 in the Greater Victoria Sewerage Study, including parts of Saanich, Victoria, and Esquimalt Municipalities.

The quantity of effluent to be discharged is as follows: Maximum rate, 39 cubic feet per second, 14,625 imperial gallons per minute; maximum 12-hour discharge, 8,000,000 imperial gallons; average 24-hour discharge, 12,000,000

The operating season during which the effluent will be discharged is continuous.

The average characteristics of the effluent discharged shall be equivalent to or Tupper, better than the following: Suspended solicitors. solids, 270 p.p.m.; biochemical oxygen

de5-7518

demand, 275 p.p.m.; pH, 7 to 8; and coliform bacteria median m.p.n. of 30 x 106/100 ml.

The type of treatment to be applied to the waste before discharge is as follows: Comminution and dilution to achieve the Pollution Control Board standard at the shoreline of a median m.p.n. of 1,000 coliforms per 100 ml. during period May to September, etc., as laid down in Pollution Control Board letter dated April 13, 1966.

I, R. W. Long, hereby certify that this application does not conflict with the local by-laws of the Regional District of the Capital of British Columbia.

A copy of this application was posted on the ground on the 29th day of Novem-

ber, 1968.

This application is to be filed with the Director of Pollution Control, Parliament Buildings, Victoria, British Columbia. Any person whose rights would be affected in accordance with the Act may, within 30 days of the date of the application, or within 30 days of the date of publication in The British Columbia Gazette or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit stating how he is affected.
